Several projects for uninterrupted water supply of the population are being implemented in Kakheti region. According to the statement that the United Water Supply Company provided to InterpressNews. "Currently, we are implementing several projects in Kakheti, which envisage improving the water supply and sewerage conditions for the population of Kakheti. Among them, the construction of Tsnori and Sagarejo systems is in the final stage of completion.

At this time, the network is being tested, after which the facility will be put into operation and we will provide water to the population 24/7. Active works are ongoing in Telavi as well, where, in order to improve the water supply schedule, customers metering is an ongoing process. The network is rehabilitated. Also, with the support of the International Donor Organization, we will start the second stage of works for the uninterrupted water supply of Telavi. As a result of the implementation of the projects, the problem of water shortage in the above mentioned cities will be finally solved," said the director of the Water Supply Company Giga Mandaria.

He met with the representatives of the local municipality in Gurjaani to solve the problems related to the sewage systems and studied the current situation together with the relevant services of the company. On the instructions of the head of the company, the technical service will prepare the relevant technical assignment and conclusion to solve the problem.

In addition to these projects, the United Water Supply Company is currently constructing a well for water supply in the villages of Chiaria, Heretiskari and Tamariani in Lagodekhi Municipality, designing and constructing a water supply system in the village of Dzveli Anagi in Sighnaghi Municipality, and is arranging chlorination technology of Akhmeta water supply. For the stable and quality water supply of the city of Sagarejo, the company that won the tender will start the works in the near future. Also, a tender has been announced for the provision of uninterrupted water supply to 8 villages of Sighnaghi Municipality for the design and construction of new systems.

"Georgian Amelioration" Ltd completes first stage of restoration works of the Jandara main irrigation canal in Kvemo Kartli

According to the statement by “Georgian Amelioration” Ltd, a 2000-meter section of the canal in Marneuli Municipality has been cleaned of trees and shrubs. The measures implemented by the operation program will ensure uninterrupted drainage of water in the canal, which will improve the supply of irrigation water on 40 hectares of agricultural land in the municipality.

Currently, 34 amelioration infrastructure rehabilitation projects are underway across the country, after the completion of which additional 3,200 hectares of agricultural land will be irrigated.

"Irrigation water supply will be improved on more than 17,000 hectares, and the amount of drained area will be increased to 4,500 hectares," the statement said.

Heavy flood creates problems in Kakheti

Heavy rain and hail damaged Kvareli and Telavi in Georgia's Kakheti region. The vineyards have been devastated by hail.

Trees have fallen, due to which the traffic from Telavi to Kvareli is limited.

Authorities are working on rectifying the affects of the natural disaster.

A new system will be arranged for water supply in the village Matani

The United Water Supply Company continues to actively implement the projects in the regions of Georgia defined by the current year’s plan for a stable water supply to the population.

This time, the company plans to build a new water infrastructure in the village of Matani, Akhmeta Municipality (Kakheti region). A tender has already been announced for the rehabilitation of the water supply system. The estimated cost of the project is more than 7 million GEL.

Currently, the network in the village Matani is depreciated and the existing infrastructure needs to be upgraded. Drinking water is supplied to the locals by schedule. The project envisages replacement of old pipes with new ones, construction of a new reservoir and chlorination station.

Also, arrangement of new drainage and shore protection gabions in the Kurtanadzeuli riverbed is planned. Individual metering of subscribers is also planned for rational water consumption. Upon completion of the project, more than 4,500 local 24-hour water supplies will be provided.
