Construction of systems to provide uninterrupted water supply to 8 villages of Sighnaghi Municipality starts

Water system rehabilitation works are starting in 8 villages of Sighnaghi municipality. The United Water Supply Company of Georgia spreads information about it.

According to them, the project envisages uninterrupted water supply to the villages of Tibaani, Anaga, Bodbiskhevi, Kvemo Bodbe, Sakobo, Vakiri, Jugaani and Kvemo Mine.

The construction company "Gza" Ltd., which won the tender, will start the construction in the coming days.

“The contractor must complete the works envisaged by the project within 26 months. 27 million GEL is provided for the arrangement of the rural water system with the funding of the Government of Georgia.

The works envisage the arrangement of a completely new distribution network and wells, as well as the construction of new reservoirs and chlorinators. "As a result of the completion of the works, the population of the mentioned villages, which has been using the schedule and local wells for decades, will be provided with 24-hour, quality water supply for the first time,” the statement reads.

The Tbilisi Sea Hydrological Survey was conducted

According to the mayor of the capital, Kakha Kaladze, based on the results of the Tbilisi Sea Hydrological Survey, regulations have been prepared, the observance of which will be mandatory in the Tbilisi Sea Sanitary Protection Zones.

As the mayor of the capital Tbilisi stated at the meeting of the Tbilisi Municipality government, the regulations will come into force after the approval of the relevant legal act by the City Council.

At the initiative of the City Hall, a large-scale hydrological survey of the Tbilisi Sea basin and the surrounding area was carried out. This study was conducted for the first time and its purpose was to determine the sanitary protection zones of the Tbilisi Sea. As a result of the research, the sanitary protection areas of the sea were identified and reflected in the interactive map of the capital with exact coordinates. "Activities that caused water pollution were restricted in each protection area, including construction, arbitrary connections to the sewerage system, which unfortunately we had, economic activities, and so on," Kaladze said.

The first stage of works to improve water supply in Telavi will be completed in October

The water supply company will complete the works envisaged in the first stage in October to ensure the improvement of water supply in Telavi. As InterpressNews was informed by the water supply company, the network is being rehabilitated, wells and meters are being arranged. The water supply system in Telavi has been depreciated for years, due to which water is supplied to the population on a limited schedule.

According to them, the director of the water supply company, Giga Mandaria, got acquainted with the already performed works on the spot.

“Water supply network is being rehabilitated in Telavi and the population is being re-metered. Approximately 4,000 meters are to be installed. Also, wells are being arranged. Construction of the first well has been completed and testing is currently underway.

Therefore, after the implementation of these projects, we will receive improved water supply for the population of Telavi. In addition, a new tender will be announced in the coming days, which provides water supply to Telavi from "Tsitsmatiani" and also, it is planned to launch a new project this year with the support of international donors, which is done for 24 hour water supply in Telavi, "said Giga Mandaria, director of the water supply company, after inspecting the ongoing works in Telavi.

The Municipal Development Fund of the Ministry of Regional Development and Infrastructure has completed the rehabilitation works of local roads and water supply system in the IDP settlement of Shida Kartli region.

As InterpressNews was informed by the Municipal Development Fund of the Ministry of Regional Development and Infrastructure of Georgia, the project was spent on more than 7.2 million GEL with the funding of the Government of Georgia.

Giorgi Shengelia, Executive Director of the Municipal Development Fund and Simon Guledani, Acting State Representative of Shida Kartli inspected the rehabilitation works. Road and water supply works were carried out in 11 different places. 2 wells were arranged and a total of 14 km of road was laid on 9 different sections. As part of the project, drainage channels and entrances to the yard with grids were arranged. Work began in November 2019 and was completed ahead of schedule in August this year.

As a result of the project, road and water infrastructure was improved in 10 settlements: Tserovani, Akhaltsopeli, Berbuki, Teiliani, Metekhi, Mokhisi, Skra, Khurvaleti, Shavshvebi and Gugutiantkari. "Creating decent living conditions for IDPs is one of the main priorities of the fund," the statement said.
